

### EASTERN WOODLANDS INDIANS

The Indians of North and South America did not all live in the same way. Such things as a dry or wet climate, the presence of forests or deserts, mountains or plains, and nearness to oceans or lakes helped determine how a group of Indians lived. For example, the Indians of the dry areas of what is now Arizona and New Mexico lived very differently from the forest Indians of New York and New Jersey. However, no matter where the Indians lived they learned how to use the things around them to provide food, clothing, and shelter.

The picture at the right shows the homes and some of the activities of the Eastern Woodlands Indians. Read the statements below. Then, *using only what you see in the picture*, decide which statements below are true, which may be true, and which probably are not true. Put checks in the correct boxes on the chart.

Statement	True	May Be True	Probably Not True
1. These Indians knew how to use fire.			
2. The floor of the wigwam is covered with fur rugs.			
3. Fish from the lake were caught and used for food.			
4. The sides of the canoe are made of bark.			
5. These Indians moved frequently from place to place.			
6. Several families lived in the wigwam.			
7. Wood was used for many different things.			
8. An Indian man is making the canoe waterproof.			
9. The illustration shows winter activities.			
10. The canoe can carry only two people.			
11. Hunting was an important occupation.			
12. The lake water was used for drinking and cooking.			

\* On a separate sheet of paper, explain why you chose each of the answers above.
